ABOUT WEIT SOLUTION

Built by engineers, for businesses

A Dhaka-based IT infrastructure and cyber security company built around one idea: we take care of your network so you can take care of your business.

WeIT Solution (WIS) was started by network and security engineers who saw the same problem in office after office: networks installed without a plan, firewalls left on default settings, and no one accountable when things went wrong. We set out to be the team that designs it properly, documents it clearly and stays with the client long after installation.

COMPANY FACTS

Company	WeIT Solution (WIS)
Focus	Network & Cyber Security

Office	Adabor, Dhaka-1207
Support	24×7 hotline

OUR VISION

Vision

To be the most trusted network and cyber security partner for growing businesses in Bangladesh, known for engineering quality, honest advice and dependable support.

OUR MISSION

Mission

To design, secure and operate IT infrastructure that our clients can rely on every day, using proven technology, certified skills and long-term relationships rather than one-time sales.

OUR VALUES

1

Engineering first

Every design starts from requirements, standards and security, not from a product brochure.

2

Accountability

One team owns the result, from site survey to support, with clear SLAs.

3

Transparency

Fixed scopes, clear quotations and documentation you keep.

4

Continuous learning

Our engineers keep their certifications and skills current.

— WHY WEIT SOLUTION

Seven reasons businesses choose WIS

One accountable team that designs it properly, documents it clearly and stays with you after installation.

1

Certified engineers

Our team holds vendor and industry certifications across networking, security and cloud, and the people who design your project also deploy it.

2

Security by design

Segmentation, hardening, least-privilege access and logging are built into every network we deliver.

3

End-to-end delivery

Survey, design, supply, installation, testing, documentation and support from a single accountable team.

4

Multi-vendor expertise

We work across leading platforms and recommend what fits your requirements and budget, not what earns the biggest margin.

5

Fast local support

Our office in Adabor puts most of Dhaka within quick reach for on-site work, with a 24×7 hotline for support customers.

6

Clear documentation

You receive network diagrams, IP and VLAN plans, configurations and runbooks at handover.

7

SLA-backed services

AMC and managed service plans with defined response times, preventive maintenance and monthly reporting.

WHAT WE DO

Eight business units, **cable to cloud**

Specialised practices covering design, deployment and day-to-day operation of your IT estate.

NS

Network & Security

High-performance, secure networks for offices, factories, campuses and branches.

Campus & Office LAN

SD-WAN

Enterprise Wi-Fi

Next-Generation Firewall

CS

Cyber Security

Protect your people, data and systems from modern threats.

Firewall & UTM

Endpoint Protection & EDR

Email Security

SIEM & Log Management

DC

Data Center & Cloud

Modernize your servers and storage and move to cloud at your own pace.

Servers & Storage

Virtualization

Hyper-Converged Infrastructure

Hybrid Cloud

PI

Passive Infrastructure

Structured, labelled and future-ready physical infrastructure.

Structured Cabling

Fiber Optic Backbone

Fiber Splicing & Testing

Racks & Cable Management

MS

Managed Services

24x7 monitoring, support and maintenance for your critical systems.

24x7 NOC Monitoring

Helpdesk & Remote Support

On-site Support

Annual Maintenance Contract

IC

IT Consulting

Strategic, vendor-neutral advice to plan the right technology roadmap.

IT & Network Audit

Security Assessment

Architecture Design

IT Roadmap & Budgeting

SW

Software Solutions

Custom business software and integrations built for how you work.

Business Websites

Web Portals & Dashboards

ERP & Business Apps

System Integration & APIs

SA

CCTV & Access Control

Smart surveillance and access systems for safer workplaces.

IP CCTV Systems

Video Management

Access Control

Time Attendance

SOLUTIONS

Solutions built around business outcomes

Combined offerings that bring our business units together to solve a specific need.

DW

Digital Workplace

Give your people secure tools to work and collaborate from anywhere.

Microsoft 365 & Google Workspace

Business Email

Identity & Single Sign-On

Device Management

SE

Secure Enterprise

Layered protection from the perimeter to the endpoint, monitored around the clock.

Next-Generation Firewall

Web Application Firewall

EDR / XDR

SIEM & SOC

MD

Modern Data Center

Reliable, scalable and efficient infrastructure for your core applications.

Assessment & Sizing

Virtualization Platform

Hyper-Converged Infrastructure

Enterprise Storage

CM

Cloud Migration

Move to Azure or AWS with a clear plan, controlled cost and no surprises.

Cloud Readiness Assessment

Landing Zone Setup

Server & App Migration

File & Email Migration

BR

Backup & Disaster Recovery

Keep your business running when hardware fails, ransomware strikes or a site goes down.

Backup Strategy

Server & VM Backup

Security Subscriptions

Virtualization & Backup

Design & Productivity

FEATURED SOLUTION · SECURE ENTERPRISE

Four pillars of protection

Secure Enterprise combines our network, security and managed services into one program built around four pillars.

PILLAR 01

Perimeter & Application Protection

NGFW, WAF, secure web gateway and email security.

PILLAR 02

Threat Detection & Response

EDR/XDR, SIEM and 24x7 SOC monitoring.

PILLAR 03

Identity, Access & Data

MFA, privileged access, NAC and data loss prevention.

PILLAR 04

Resilience & Recovery

Backup, DR, incident response and recovery testing.

DELIVERY JOURNEY

From discovery to optimization

1

Discover

Understand your goals, users, sites and constraints.

2

Assess

Audit the current setup and identify risks and gaps.

3

Design

Architecture, IP/VLAN plan, bill of materials and quotation.

4

Validate

Review the design with your team and agree the scope.

5

Deploy

Install, configure and test with minimal disruption.

6

Document

Hand over diagrams, configurations and runbooks.

7

Monitor

Watch performance, health and security events.

8

Optimize

Regular reviews and improvements over time.

Every project ends with full documentation

Network diagrams, IP & VLAN plans, configurations and runbooks handed over to you.

INDUSTRIES WE SERVE

Technology for the sectors that power Bangladesh

Purpose-built infrastructure and security for each industry's operations and compliance needs.

Banking & Financial Services

Secure, resilient and compliant infrastructure for banks, NBFIs, insurers and fintechs.

Branch & ATM Connectivity

Data Center Modernization

Security Operations

Healthcare & Pharmaceuticals

Reliable networks and protected data for hospitals, clinics and pharmaceutical companies.

Hospital Network & Wi-Fi

Medical Device Segmentation

Patient Data Protection

Garments & RMG

Factory-ready IT for production floors, offices and buyer compliance.

Factory-wide Network

Industrial Wi-Fi

ERP Infrastructure

Manufacturing & Industrial

Robust connectivity and security for plants, warehouses and supply chains.

Industrial Networking

OT / IT Segmentation

Warehouse Wi-Fi

Education & Research

Campus networks and secure digital learning for schools, colleges and universities.

Campus Network

High-density Wi-Fi

Content Filtering

Government & Public Sector

Secure, documented and standards-based infrastructure for public institutions.

Secure Office Networks

Perimeter Security

Data Center Build-out

NGOs & Development

Cost-effective, secure IT for field offices and donor-funded programs.

Field Office Connectivity

Cloud Collaboration

Data Protection

Retail & E-commerce

Connected stores, secure payments and always-on online platforms.

Store Connectivity

POS Network Security

Store CCTV

Telecom & ISP

Carrier-grade routing, security and operations support for ISPs and service providers.

Core & Edge Routing

BRAS & Subscriber Management

Fiber Network Design

Corporate & MNC

Enterprise-standard IT for corporate head offices and multinational companies.

Corporate Office Fit-out

Group Policy Alignment

Secure Connectivity

OUR TEAM

Teams that deliver **your project**

1

Leadership

Sets direction, owns client relationships and makes sure every project meets our quality standard.

2

Network Engineering

Designs and deploys LAN, WAN, SD-WAN and enterprise Wi-Fi for offices, factories and campuses.

3

Security Operations

Configures firewalls and endpoint security, monitors threats and responds to incidents.

4

Cloud & Systems

Builds servers, virtualization, storage, backup and Microsoft 365 / Azure / AWS environments.

5

Infrastructure & Cabling

Plans and installs structured cabling, fiber, racks, CCTV and access control.

6

Support Desk

Handles tickets, remote support and on-site dispatch under agreed SLAs.
